

BERK ISLER

MSc. Data Science

@ berk.isler94@gmail.com

📍 NETHERLANDS

in berk-isler

Results-driven machine learning scientist with a track record of delivering end-to-end production models. Translate ambiguous requirements into concrete ML problems, lead data discovery and feature design, and build PoCs. Ship reproducible Python/SQL/Spark pipelines (batch and real-time) with CI/CD, monitoring, and governance under compliance constraints. Hands-on with neural-nets using TensorFlow/PyTorch and collaborating closely with engineering and product to drive measurable impact.

WORK EXPERIENCE

Data Scientist

Bol

📅 Jan 2026 – Present

📍 Utrecht

- Built customer intelligence data products and transformer-based sequential ML models to predict shopping behavior and improve marketing personalization and targeting
- Developed agentic AI workflows with LLM fine-tuning for automated customer segmentation and marketing campaigns
- Designed and maintained scalable data & ML pipelines using Airflow and dbt, and defined data contracts within boundary APIs to ensure reliable downstream data consumption

AI Model Developer

DLL Group

📅 Oct 2024 – Dec 2025

📍 Eindhoven

- Translated ambiguous risk requirements into concrete ML problems: led data discovery, set offline metrics tied to business KPIs, built PoCs, and aligned stakeholders on trade-offs
- Built tree-based & survival models for delinquency risk; PR-AUC +0.09, shipped model cards and validation reports with explainability and calibration analyses
- Owned the E2E ML lifecycle (EDA → MLOps) under compliance constraints, implementing reproducible pipelines, CI/CD, monitoring, and governance artifacts for auditability and safe deployment

Artificial Intelligence Engineer

Vanderlande

📅 Apr 2021 – Oct 2024

📍 Veghel

- Modeled complex interactions with Bayesian Networks and causal inference to explain system behavior; improved fault attribution accuracy by 12%
- Delivered real-time sequence anomaly detection (f1-score >0.78) and a multi-stage CV pipeline (detect-track-segment) in real-time <200 ms per event; wrote deployment & test documentation

SKILLS

Git SQL Grafana Matlab MLFlow FastAPI
Python TensorFlow PyTorch PySpark Airflow
MS Azure Suite Google CCloud Platform Databricks
Docker

EDUCATION

M.Sc. Data Science in Engineering

Eindhoven University of Technology

📅 Sept 2018 – Oct 2020

🎓 GPA: 8.35/10 (Cum Laude)

B.Sc. Manufacturing Engineering

Istanbul Technical University

📅 Sept 2012 – June 2017

🎓 GPA: 3.46/4.00 (Ranked 1st)

INTERNSHIPS

Master Thesis

Prosus/Naspers

📅 Mar 2020 – Oct 2020

📍 Amsterdam

- Project on quantifying (Model Calibration) and controlling (Disentanglement) uncertainty for image-based object classification tasks.
- Novel pipeline that can reason about the root causes of prediction uncertainty during inference time of the model.
- The pipeline uses uncertainty to manipulate factors that contribute to the uncertainty the most and increase prediction accuracy.

Machine Learning Intern

ThermoFisher Scientific

📅 Aug 2019 – Nov 2019

📍 Eindhoven

- Developed descriptive maintenance framework and Natural Language Processing(NLP) pipeline for Transmission Electron Microscopes (TEM) maintenance data.
- Deployed cutting edge language models (BERT, ULMFiT, HAN), transfer learning methods in multiclass text classification setting.
- Automatize failure analysis of TEM's using textual data.
